## **DETAILED ACTION**

### ***Specification***

The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

The title of the invention is not descriptive. A new title, that is clearly indicative of the invention which the claims are directed, is required in response to this office action.

The abstract of the disclosure is objected to because it does not contain or describe claim invention. Correction is required. See MPEP § 608.01(b).

### ***Drawings***

New corrected drawings are required in this application because there is no submitted drawings that describe the claim's invention. A flow chart, that is described the claim's invention, is required. Applicant is advised to employ the services of a competent patent draftsman outside the Office, as the U.S. Patent and Trademark Office no longer prepares new drawings. The corrected drawings are required in reply to the Office action to avoid abandonment of the application. The requirement for corrected drawings will not be held in abeyance.

### ***Claim Objections***

Claim 1 is objected to because of the following informalities: The word "and" needs to be added to claim # 1 after element (c). Appropriate correction is required.

***Allowable Subject Matter***

Claims 1-4 are allowable. The following is a statement of reasons for the indication of allowable subject matter: The prior art fails to teach or suggest a method for data compression that implement the following steps: (a) recording a first waveform at a plurality of data points; (b) compressing said data points by a first protocol to derive a first compressed data; (c) compressing said data points by a second protocol to derive second compressed data; and (d) comparing said first compressed data to said second compressed data to determine which would require less memory for storage.
